

# PROtection that keeps the heart of your manufacturing process from going into cardiac arrest.

# PROTECTOR

“Every time the power blinks, your PLC is gambling. Voltage spikes, brownouts, power surges - they’re invisible until they’re expensive. PROtector monitors your power continuously, disconnects in under 20ms when it goes wrong, and only restores power when it’s stable again. Protect your PLCs, HMIs, and plant computers - before the next blink costs you a shift.”

## Layers of defense for your most critical equipment

### Over/Under Voltage Protection

Greatly reduces risks of damage from too high or low voltage. Shields from power variations.

### Brownout Monitoring

Continuous internal monitoring prevents PLC program flashing during voltage drops - reaction under 20ms.

### Smart Power Restore

Holds for a pre-set stability period after quality power returns before safely re-powering equipment.

### Wide Compatibility

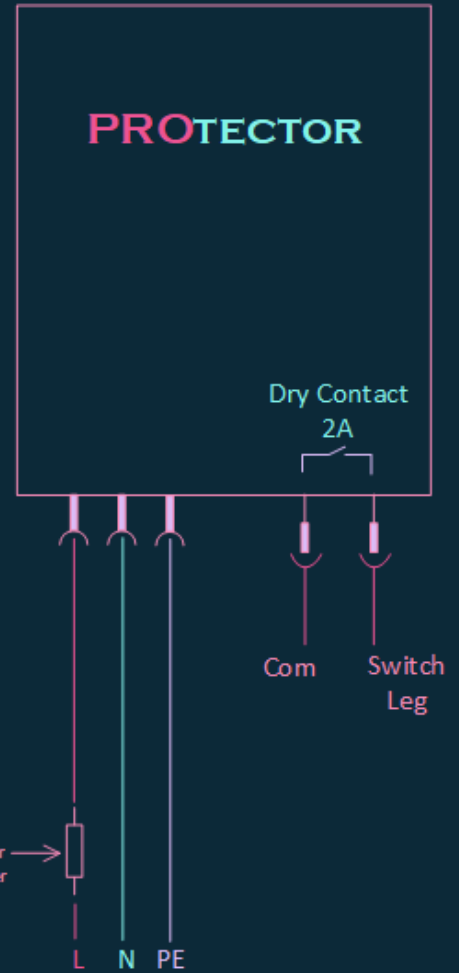

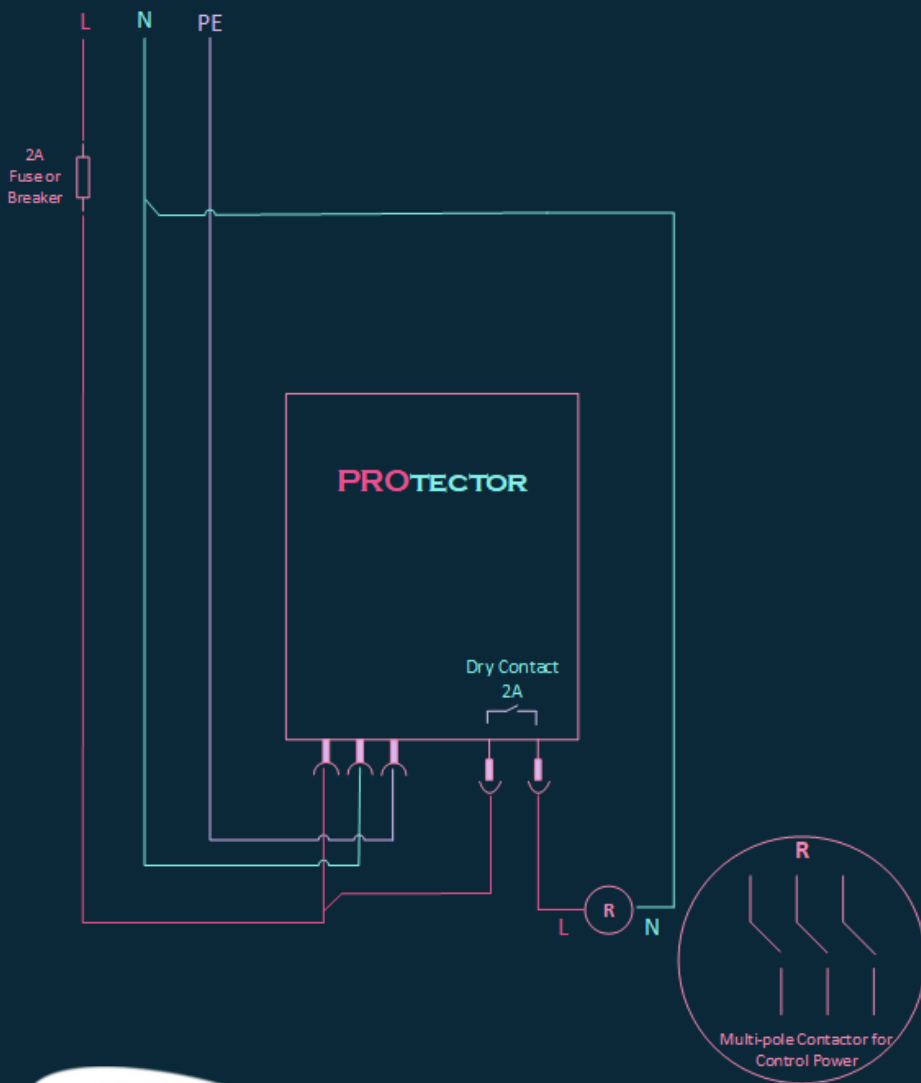

Protects PLCs, HMIs, plant computers, and any other sensitive industrial components.

Standard input voltage	+/- 110 Vac
Reaction time	< 20 ms
Contact output	2 Amp
Status indicators	Unit status LEDs
Installation	In-line, power circuit
Warranty	1-year manufacturer's limited
